1 Overview

1.1 Introduction

GD3200A/GD3200B **has serial port control function and supports** MP3, WAV, WMA **formats**

The **hard-decoding** SOC **chip can be connected to external storage devices such as** TF/SD card, SPI-Flash, USB flash drive, etc., and supports FAT.

FAT16, FAT32 file system. The specified music can be played through simple serial port commands, and

How to play music and other functions, without tedious underlying operations, easy to use, stable and reliable is the key of this product

The biggest feature.

In addition, the chip is also a deeply customized product, specially developed for the field of fixed voice playback.

The solution can be customized to support G726, G729, FLAC, APE, M4A, ALAC, AMR, DTS,

Decoding of audio formats such as MIDI and MTY .

1.2 Functionality

1. Support sampling rate (KHz): 8/11.025/12/16/22.05/24/32/44.1/48;

2. 24- **bit** DAC **output, dynamic range supports 90dB, signal-to-noise ratio supports** 85dB;

3. Fully support FAT, FAT16, FAT32 **file systems,**

4. Support up to 128M bit SPI-Flash, 32G **TF** card , **and** 32G **USB** flash drive;

5. Control mode: serial port mode, AD button control mode;

6. Broadcast voice interruption function, which can pause the background music being played;

7. Audio data is sorted by folder, supporting up to 99 **folders, and each folder can be allocated** 255

First song;

8. 30 **levels of volume adjustable, 6 EQ** options **available;**

9. SPI-Flash can be plugged in externally. When connected to a computer, the drive letter of SPI-Flash can be displayed **to update the content;**

10. The music with the specified file name can be played through the serial port (Uart);

1.3 Electrical parameters

name	parameter
Audio file formats	**1. Support** MP3, WAV, WMA
	2. Sampling rate support (KHZ): 8/11.025/12/16/22.05/24/32/44.1/48
	3. Support Normal, Jazz, Classic, Pop, Rock **and other sound effects**
USB **interface**	Full speed USB 2.0 OTG controller
UART **Interface**	**Standard serial port, TTL** level, baud rate 9600bps
Input voltage	The power supply is 3.2V-5V, the best is 4.2V
Rated current	20ma[without USB **flash drive]**
size	**Standard** SOP16 package
Operating temperature	-40ÿ to +85ÿ
humidity	**5%** ~ 95%

2. Chip usage instructions

AD **button**   UART **Serial**

power supply   **MCU+DSP** DA   **Amplifier**

USB flash drive   TF **Card** SPI-Flash
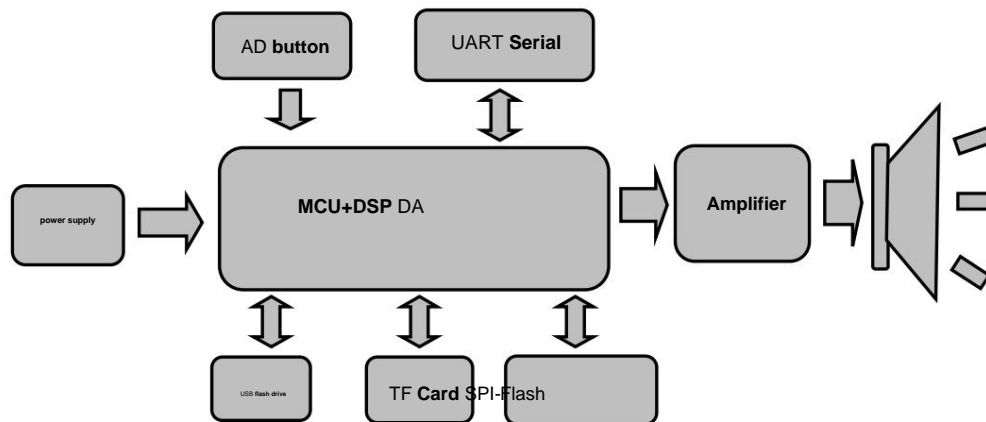

The chip uses a SOC **solution, integrates a** 32 **-bit DSP, and uses hard decoding.**

The system stability and sound quality are guaranteed. The small package size is more suitable for embedding in other products.

2.1 SPI-Flash to change the voice content

Taking 16M flash **operation as an example, the specific operations are as follows.**

2.1.1 Insert USB to connect to computer

2.1.2 Formatting the Disk
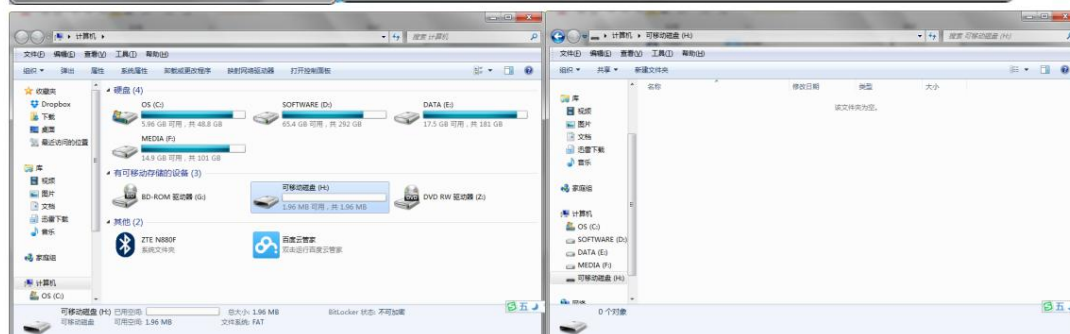

As shown in the figure, it can be used as a USB **flash drive. When** the flash **is used for the first time,** 2.1.1 is required.

After the operation is completed once, if the flash **is not formatted or deleted later, it is not necessary**

Repeat the above steps.

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd.   **GD3200A/GD3200B/GD3200D Datasheet**

2.1.3 Loading Voice
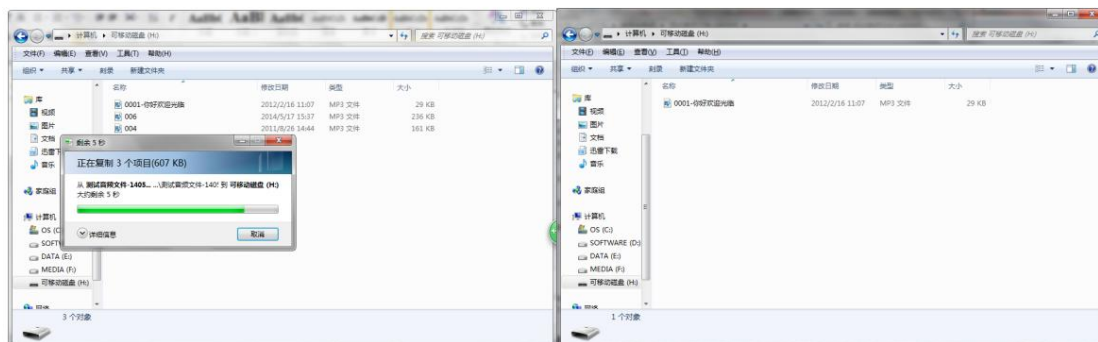

As shown in the picture above, just drag the voice file into the USB **drive. The operation** is exactly the same as that of SD **card and USB drive.**

2.2 Chip Pin Description

Pin No. Pin Name		Function Description Notes	
1	ADK1	ADKEY2 external button must **be pulled up at** 22K	
2	ADK2	ADKEY1 external button must **be pulled up at** 22K	
3	BUSY	Busy **output decoding output signal**	
4	VDD	**5V power input cannot exceed 5.2V**	
5	VDDIO	3.3V **power output to** power TF card, SPI, 24C02	
6	**SPI_DO /SD_CLK**	**SPI_DO data bus** SD_CLK **clock bus**	
7	SPI_CLK/SD_CMD	**SPI_CLK data bus** SD_CMD **command bus**	SPI-flash **and TF/SD card can only be selected** **Next device**
8	**SPI_CS /SD_DAT**	**SPI_CS chip select bus** SD_DAT **data bus**	
9	DM	USB	
10	DP	USB	
11	TX	UART **serial data output**	Baud rate: 9600bps
12	RX	UART **serial data input**	
13	DAC_R	**Audio output right channel**	
14	DAC_L	**Audio output left channel**	
15	VSS	**Power Ground**	
16	VCOM	**Coupling foot**	

3. Control method description

3.1 Button Interface

The **chip uses** AD **keys to replace the traditional matrix keyboard connection. The advantage of this is that it makes full use of** the **increasingly powerful**

AD **function** of the MCU . The chip is configured with 2 AD ports by default, and **the resistance value of 20 keys is allocated. If it is used in places with strong**

electromagnetic interference or strong inductive or capacitive loads, please refer to the "Precautions".

AD **button resistance corresponding function reference diagram:**
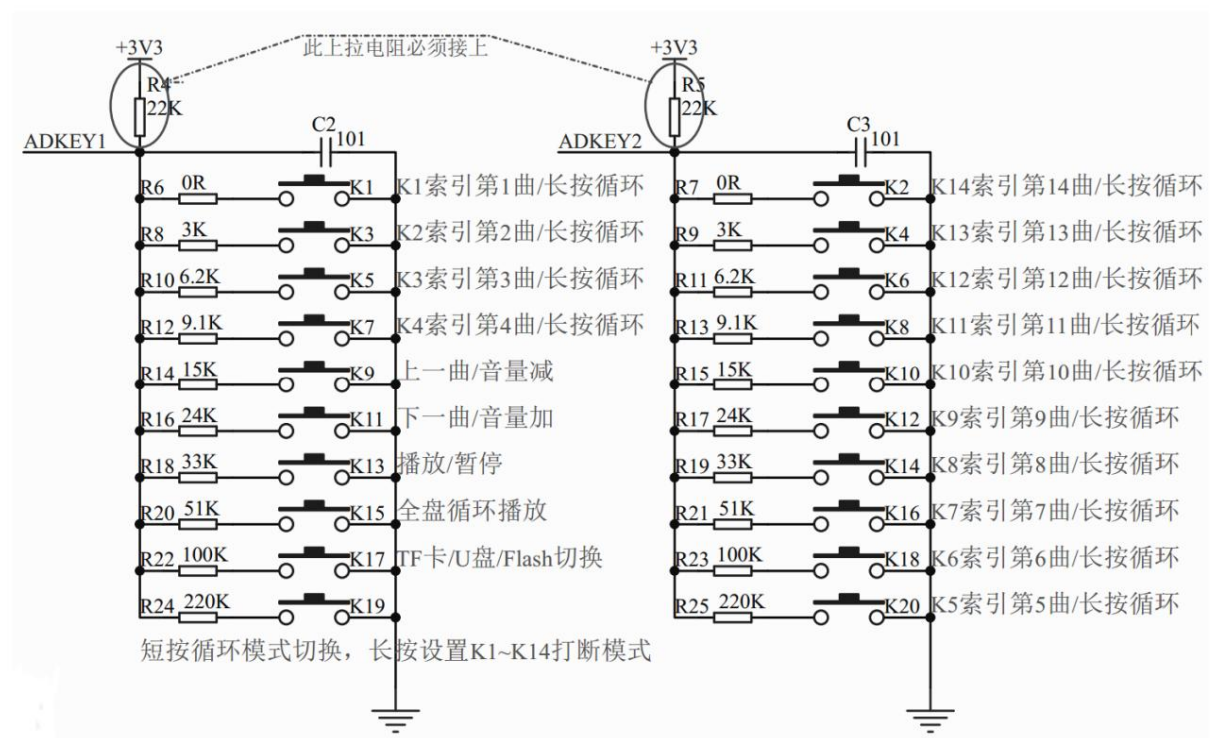

3.2 **Serial communication format**

Support asynchronous serial communication

mode Baud rate : 9600 bps **Parity**

bit : none Data bit : 8

Stop bit : 1 **Flow**

control : none

Format: $S VER Len CMD Feedback para1 para2 checksum $O	
$S starts at 0x7E. **Each command feedback starts with $, i.e. 0x7E**	
VER	Version 0xFF **version information [currently defaults to** 0xff]
Len	**Number of bytes after** len **VER + Len +** CMD **+** Feedback **+** para1 **+** para2
CMD	**Command words represent specific operations, such as play/pause, etc.**
Feedback **Command feedback: whether feedback is needed, 1 for feedback, 0 for no feedback**	
para1	**Parameter 1: High byte of the data to be queried (such as the song number)**
para2 **parameter 2 query data low byte**	
Checksum Checksum [occupies two bytes] Cumulative checksum [only counts the length bit data superposition]	
$O **end bit** 0xEF end bit 0xEF	

If we specify to play SPI-Flash, we need to send: 7E FF 06 09 01 00 04 FE ED EF

The data length is 6 bytes , **which are [FF** 06 09 01 00 **04], excluding the start bit [7E], checksum**

and [FE **ED], end bit [EF]; the checksum is calculated as the length bit. After adding all the data, the result is taken.**

Counter +1.

3.3 Communication instructions

3.3.1 Directly sent command with return code.

The function corresponding to		Order
	is 0x01 **next song**	
0x02 **Previous song**		
0x03 **Specify index to play** 0x04		**Two bytes in length, supports up to 65535 audio segments**
Volume increase 0x05		Maximum level 30
Volume decrease		Minimum level 0
0x06 **Specify volume**		**0~30 levels of volume adjustment**
0x07 Specify EQ0/1/2/3/4/5 0x08		Normal/Pop/Rock/Jazz/Classic/Bass
Specify track index Single song loop play 0x09		**Two bytes in length, supports up to 65535 audio segments**
Specify playback device 0x0A		**1: U disk; 2: TF** card; 4: Flash
Shutdown 0x0B		**After shutdown, the IC's second pin (ADK2) can wake up and restart the device**
NC (reserved) 0x0C **Reset**		**Invalid command**
and restart		
0x0D **Play**		
0x0E **Pause**		
0x0F **Play the file name in the specified folder**		Folder name: 01~99 (FF **indicates the specified root directory file name);** The first three digits of the file name must be numbers 001~999?.mp3
0x10 **NC (reserved)** 0x11		**Invalid command**
Play the entire disc in a loop		1: loop play; 0: stop loop play
0x12 **Specify the file name in the "MP3" folder to play**		**Less than 10000, identify the first 4 digits 0001~9999?.mp3** Above 10000, identify the first 5 digits 10000~65535?.mp3
0x13	Specify the file name under the "ADVERT" folder **Insert**	**Less than 10000, identify the first 4 digits 0001~9999?.mp3** Above 10000, identify the first 5 digits 10000~65535?.mp3

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd. **GD3200A/GD3200B/GD3200D Datasheet**

0x14 **Play the file name in the specified folder**		Folder name: 01~15; see the command description for details. The first 4 digits of the file name must be numbers 0001~4095?.mp3
0x15 **Stop the current insert and return to the background file playback**		
0x16 **Stop playing**		
0x17 **Specify the folder name to play in a**		Folder name: 01~99 corresponds to 99 folders
loop 0x18 **Play the entire disk randomly**		
0x19 **Set single song to play in loop**		**0: single loop; 1: cancel single loop;** **This command has no playback function and needs to be sent in playback state.**
0x1A **Current song (mute) MUTE setting**		**0: Unmute; 1: Mute**
0x25	Insert the file name in the folder "ADVERT1~9" broadcast	**You can specify** ADVERT1~9, a total of 9 folders **001?~255?.mp3 file name insert (recognize the first 3 digits).**

3.3.2 System response parameters

Command corresponding function		Parameters (16 bits)
0x3A **Equipment online information**		01: Udisk **inserted,** 02: TF/SD **insert,** **04: PC Insertion**
0x3B **Device offline information**		01: **Unplug Udisk,** 02: **Unplug TF/SD card.** **04: Unplug** the PC
0x3C When the USB **disk playback ends, return to the current song index**		
0x3D TF **card playback ends and returns to the current song index**		
0x3E Flash **playback ends and returns to the current song index**		
0x3F **NC (reserved)** 0x40		**Invalid command**
Return error, request resend		
0x41 **Command receiving response**		

3.3.3 Set system parameters (write 8-bit HEX)

Functions corresponding to the		Parameters (16 bits)
	0x42 **Query the current**	**01: Play; 02: Pause; 03: Stop**
status 0x43 **Query the current**		**Level 00~30**
volume 0x44 **Query the current** EQ		[0/1/2/3/4/5] Normal/Pop/Rock/Jazz/Classic/Bass
0x45 **Query the current cycle mode**		**01: Full loop; 02: Single loop; 03: File** **Clip loop; 04: Random loop; 05: Single play** **06: Single seamless loop**
0x46 **Query the current software version**		**Please view** the return value in ASCII
0x47 **Query the total number of** UDISK files		
0x48 **Query the total number of files in the** TF card		
0x49 **Query the total number of** FLASH files		
0x4A **NC (reserved)** 0x4B		**Invalid command**
Query the current track of UDISK		

GD 广州国电信息科技有限公司
gdkeji.cn Guangzhou GuoDian Information Technology Co., Ltd.   **GD3200A/GD3200B/GD3200D Datasheet**

0x4C **Query the current track of the** TF card	
0x4D **Query the current track of** FLASH	
0x4E **Query the total number of files in the current folder**	
0x4F **Query the total number of folders**	

3.4 Data returned by the chip

The chip will return data at key locations so that users can control the working status of the chip.

ÿ •**Data of successful chip power-on initialization;**

•ÿ **The chip has finished playing the data of the current track;**

•ÿ **The chip successfully receives the ACK (response) returned by the command;**

•ÿThe chip receives a frame of data with an error [including two situations: data is not received completely and verification is wrong];

•ÿ **When the chip is busy, if data comes in, the chip will return a busy instruction;**

•ÿ The data will be returned when the USB disk or TF **card is inserted or removed.**

3.4.1 Data returned when the chip is powered on

(1) When the chip is powered on, it takes a certain amount of time to initialize. This time depends on the USB flash drive, TF **card,**

The time is determined by the number of files on the flash **device, usually** 1.5 to 3 seconds .

The initialization data of the chip has not been sent out for a period of time, indicating that the chip initialization error occurs. Please reset the chip.

 Power supply, and also check the hardware connection.

(2) Chip initialization data includes the lower four bits DL (bit0~bit3) **of the low byte of the online device data .** For example,

7E FF 06 3F 00 00 01 FE BB EF; DL=0x01 **indicates that during the power-on process, only** the USB **flash drive is online.**

Please refer to the following table for its data and the relationship between the devices:

Data bit	Bit3(PC)	Bit2(Flash)	Bit1(SD)	Bit0(U disk)	
[0x01]: U	0 0		0	1	
disk online [0x02]: TF/SD	0	0	1	0	
card online [0x03]: U disk, TF/SD	0	0	1	1	
card online [0x04]:	0	1	0	0	
Flash online [0x05]: U disk, Flash **online** 0 **[0x06]:**		1	0	1	
TF/SD card, flash **online** 0 [0x07]: U disk, TF/SD		1	1	0	
card, flash **online** 0		1	1	1	

(3) The MCU must wait for the chip initialization command to be issued before sending the corresponding control command. Otherwise,

The chip will not process the sent command, and it will also affect the normal initialization of the chip.

3.4.2 Data returned after the track is played

The USB **drive has finished playing the** first **track**	7E FF 06 3C 00 00 01 FE BE EF USB **flash drive playback of** the first **track is complete**
The USB **drive has finished playing the** second **track**	7E FF 06 3C 00 00 02 FE BD EF USB **disk playback of** the second **track is complete**
TF/SD **card disk finished playing the** third **track** 7E FF 06 3D 00 00 03 FE BB EF USB **disk finished** playing the third track
TF/SD **card disk finished playing the** 4th **track** 7E FF 06 3D 00 00 04 FE BA EF USB **disk finished** playing the 4th track
Flash **finished playing the** 5th **song**	7E FF 06 3E 00 00 05 FE B8 EF USB **flash drive playback of the** 5th **track is complete**

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd. **GD3200A/GD3200B/GD3200D Datasheet**

| Flash **finishes playing the** sixth | 7E FF 06 3E 00 00 06 FE B7 EF USB **flash drive playback of the** 6th **track is complete** |

song (1) , **and the playback is paused, outputting a high level.**

(2) **For continuous playback applications, this can be achieved. If** the USB **flash drive finishes playing the first song,**

Return 7E FF 06 3C 00 00 01 FE BE EF

3C ---- **indicates** the USB **flash drive command;**

00 **01----Indicates that the song has been played. At this time, send the command to play the next song, and the songs will be played in sequence.**

put.

(3) After the chip is powered on and initialized normally, the chip will automatically enter the device playback state and stop decoding.

Waiting for the user to send relevant playback instructions.

(4) In addition, after the user specifies the device, he needs to wait for 200ms **before sending the specified track.**

Because once the track is specified, the system will initialize the file system of the specified device.

Sending a specified track command will cause the chip to not receive it.

3.4.3 Data returned by chip error

Return	7E FF 06 40 00 00 01 xx xx EF **chip during file system initialization**	
busy Currently in sleep mode 7E FF 06 40 00 00 02 xx xx EF **sleep mode**		
Serial port receiving error 7E FF 06 40 00 00 03 xx xx EF **The serial port has not received a frame of data.**		
Verification error	7E FF 06 40 00 00 04 xx xx EF **and checksum error**	
Specified file exceeds the range 7E FF 06 40 00 00 05 xx xx **The specified EF file exceeds the set range**		
The specified file was not found 7E FF 06 40 00 00 06 xx xx EF **The specified file was not found**		
Insertion command error 7E FF 06 40 00 00 07 xx xx EF **The current state does not accept insertion**		

3.4.5 Device plug-in and unplug-out messages

USB **flash drive insertion**	7E FF 06 3A 00 00 01 xx xx EF
TF **Insert**	7E FF 06 3A 00 00 02 xx xx EF
TF **pull out**	7E FF 06 3B 00 00 01 xx xx EF
Unplug the PC	7E FF 06 3B 00 00 02 xx xx EF

3.5 Detailed explanation of serial port commands

3.5.1 Specify song playback instructions

(1) For example, to select the first song to play, the sending part of the serial port is 7E 10 06 03 00 00 01 FF E6 EF 7E

---Start command

FF---version information

06---Data length (excluding checksum)

03---represents the command byte

00---Whether a response is required [0x01: a response is required, 0x00: no response is required]

00---High byte of the track [DH]

01---The low byte of the track [DL], which represents the first song played

FF---high byte of checksum

E6---low byte of checksum

EF---End command

(2) For song selection, if you select the 100th song , **first** convert 100 **into** hexadecimal , **the default is double byte, which is** 0x0064. DH=0x00; DL=0x64. **(3) If you select**

the 1000th song **to play, first** convert 1000 **into** hexadecimal , **the default is double byte, which is** 0x03E8; DH=0x03; DL=0xE8. (4) The operation of other songs can be

deduced in the same way, because hexadecimal **is the most convenient operation in the embedded field .**

3.5.2 Specify volume playback command (0x06)

 (1) When the system is powered on, the default volume is 30 **levels. If you want to set the volume, just send the corresponding**

 command. **(2) For example, to set the volume to** 15 **levels, the command sent by the serial port is: 7E** FF 06 06 00 00 0F FF D5 EF.

 (3) DH=0x00;DL=0x0F, 15 is converted to hexadecimal **as 0x000F. Please refer to the instructions in the section on**

playing tracks.

3.5.3 Specify playback device (0x09)

　　　After specifying the device, the chip will automatically enter the stop decoding state and wait for the user to specify the track to play.

Receive the designated device to complete the initialization of the file system inside the chip. It takes about

200ms. Please wait 200ms **before sending the**

command for the designated track. Designated playback device-U disk 7E FF 06 09 00 00 01 xx xx EF xx **xx:**	
represents verification Designated playback device-SD disk 7E FF 06 09 00 00 02 xx	
xx EF **Designated playback device-FLASH** 7E FF 06 09 00 00 04 xx xx EF	

3.5.4 Play in a specified folder (0x0F)

001?.mp3 in the specified folder 01	7E FF 06 0F 00 01 01 xx xx EF	**The command only recognizes the first** 3 **digits, and "?" represents any number of characters.**
100 ?.mp3 **in the specified folder 11** 7E FF 06 0F 00 0B 64 xx xx EF		
255?.mp3 in the specified folder 99	7E FF 06 0F 00 63 FF xx xx EF	
254?.mp3 in the specified root directory FF	7E FF 06 0F 00 FF FE xx xx EF	

Note: When the folder name is "FF", it means that the file name in the specified root

 directory is played. **(1) Specifying folder playback is an extended function we have developed. The default folder**

 naming method is "01" and "11". Because our chip does not support the recognition of folder names with

 Chinese characters, for the stability of the system and the speed of song switching, each folder supports a

 maximum of 255 **songs by default, and supports a maximum** of 99 **folders. If the customer has special**

 requirements and needs to classify according to English names, we can also achieve it, but the name can only be

composed of English names such as "GUSHI" and "ERGE". However, the mp3 **file needs to add a prefix, which can be**

 changed from "Have to Love.mp3" to "002 Have to Love.mp3".

(2) For example, to specify the 100xxx.MP3 file in the "01" folder , **the**

command sent by the serial port is: 7E FF 06 0F 00 01 64 xx xx EF **DH:**

represents the name of the folder, and supports 99 **files by default, that is, 01--99 ; DL:**

represents the track, and the default maximum number of songs is 255 ,

that is, 0x01~0xFF. (3) **For the standardization of the chip, you must specify both the folder and the file**

name to lock a file. It is also possible to specify a folder or a file name alone, but this will make file

management worse. Specifying folders and specifying

 tracks supports MP3, WAV (4) The following two screenshots illustrate the specification of folders and file names [divided into two

3.5.5 Playing tracks in a specified MP3 folder

Command format	7E FF 06 12 00 00 01 FE E8 EF **"MP3" folder, track "0001"**
	7E FF 06 12 00 0B B8 FE 26 EF **"MP3" folder, track "1999"**
	7E FF 06 12 00 FF FF FC EB EF **"MP3" folder, track number "65535"**
	7E FF 06 12 00 27 10 FE B2 EF **"MP3" folder, track number "10000"**

Note: When the number of files is less than 10,000 , **the first** 4 **digits must be** 4 **digits. When it exceeds**

10,000 , **the first** 5

 digits must be digits. (1) The specified

 file name is as shown in the figure on the

right: (2) Based on the specified folder and

file name, we extend the function of a single

 folder. The folder name must be "MP3".

(3) A maximum of 65,536 **tracks are**

supported, but given the operating speed of

the file system, the speed of track switching may slow down as the file size increases.
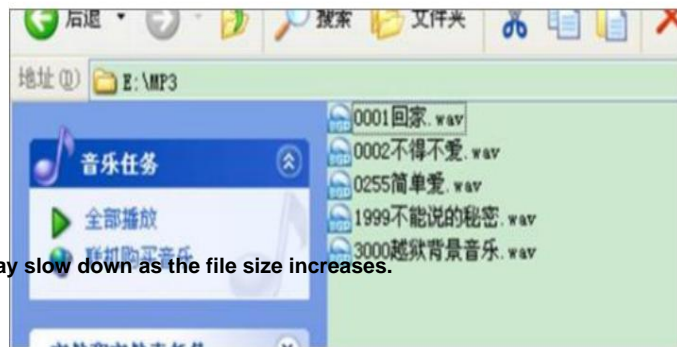

3.5.6 Insert the audio in the ADVERT folder

Command format	7E FF 06 13 00 00 01 FE E8 EF **"ADVERT" folder, track "0001"**
	7E FF 06 13 00 0B B8 FE 25 EF **"ADVERT" folder, track "1999"**
	7E FF 06 13 00 FF FF FC EB EF **"ADVERT" folder, track number "65535"**
	7E FF 06 13 00 27 10 FE B2 EF **"ADVERT" folder, track number "10000"**

Note: When the number of files is less than 10,000 , **the first** 4 **digits must be** 4 **digits, and when it exceeds** 10,000 ,

the first 5 **digits must be numbers.**

(1) We support inserting other tracks during the song selection process, so as to meet the need to insert advertisements during the background music. (2) After

sending the 0x13 command, the system will store the IDV3 information **of the currently playing track , and then play the specified insert track. After the inserted track is played, the system will return to the saved breakpoint to continue playing. Until the playback is**

completed. (3) The setting format is to create a folder named "ADVERT" in the device and store the tracks to be inserted. When the number of tracks is less than 10,000 , **the track is set to "xxxx+track** name.MP3/WAV". When the number of tracks is greater than 10,000 , **the track is set to "xxxxx+track name.MP3/WAV",**

where x **represents a digit. (4) If the system is currently in the pause or stop state, sending the insert command is only used as a general playback command. If other tracks can be inserted during the insert process, but after the playback is completed, it**

will return to the breakpoint information stored for the first time to continue playing. (5) The settings for specifying insert ads are

3.5.7 Support **4095 tracks in a specified folder**

Command format 7E FF 06 14 00 10 FF FD D8 EF **specifies the folder as "01" and the track as "0255"**	
	7E FF 06 14 00 17 CF FE 01 EF **Folder designated as "01", track number "1999"**
	7E FF 06 14 00 C0 01 FE 26 EF **Folder designated as "12", track "0001"**
	7E FF 06 14 00 C7 CF FD 51 EF **specifies the folder named "12" and the track name is "1999"**

(1) The command byte of the serial

port is 0x14 **(2) The parameter is two bytes, specifying the folder name "12" and the track name "1999?.mp3" The serial port data: 7E** FF 06 14 00 C7 CF FD 51

EF **Among them,** 0xC7 **and** 0xCF **are parameters, which are combined into** 0xC7 **CF. There are** 16 **bits in total, and the upper** 4 bits **represent the folder name. Here,** C **represents 12, and the lower** 12 bits

represent the file name. Here, 7CF **represents** 1999, which is the track with the file prefix "1999?.mp3". **(3) The folder is named as follows:**

3.5.8 All loop playback instructions

Start loop playback 7E FF 06 11	00 00 01 xx xx EF **Loop playback of all tracks Stop**	**loop playback** 7E FF 06 11

00 00 00 xx xx EF **Stop loop playback of tracks (1) During loop playback, you can operate the normal operations**

 of play/pause, previous song, next song, volume adjustment, including EQ , etc. (2) After the loop playback starts,

the chip will continuously play

 the tracks in the device in the physical order of storage. After playing once, it will continue to play until receiving the

stop, pause, etc. command.

3.5.9 Specify the track index to play a single track in a loop

0x08	
	Control commands support 0-65535 7E FF 06 08 00 00 01 xx xx EF
	loop play the first **song** 7E FF 06 08 00 FF FF xx xx EF **loop play** the
	65535th **song (1) During the loop play, you can operate the normal play/pause,**

 previous song, next song, volume adjustment, including EQ , etc. and the status is still loop play. You can use the

stop command to stop the loop play status.

3.5.10 Playback status query command

Command: 7E FF 06 42 00 00 00 EF

return command	**Playing** 7E FF	meaning
06 42 00 00 01 xx xx EF **Playing Paused** 7E FF 06 42 00 00 02 xx xx EF **Paused during**		
playback Stopped 7E FF 06 42 00 00 03 xx xx EF **Playing completed (1) The chip will have four states**		
open to the user during the decoding process. The user can obtain the current state of		

 the chip through command query. (2) Play pause means that a track is being played and a command is sent to pause

the playback. Play

 stop means that a track is played and the chip is in the play stop state.

3.5.11 Playback stop command

Stop insert 7E FF 06 15 00 00 00 FE E6 EF **Stop insert, return to background music and continue playing Stop playing**	
7E FF 06 16 00 00 00 FE E5 EF **Stop software decoding**	

3.5.12 Loop playback of specified folders

Specify folder to play in loop 7E FF 06 17 00 00 02 FE E2 EF **Specify folder** 02 to play in loop 7E FF 06 17 00 00 01 FE E3	
EF **Specify** folder 01 **to play in loop (1)** The folder naming method must be "01"---"99", and cannot exceed 99. **(2) After**	

 specifying a folder to play in loop, the voice of the folder will be played in loop continuously, and

 the instruction will be to send a stop command.

3.5.13 Randomly play device files

Random play 7E FF 06 18 00 00 00 FE E3 EF **Random play of the entire device**	
Stop playing 7E FF 06 18 00 00 01 FE E3 EF **Stop random play**	

(1) This command randomly plays the voice files stored in the device in the physical order.

It does not matter whether the device has a folder or not. And the first audio file played must be the first audio file in the device.

A voice file.

3.5.14 Set the current track to loop

Set loop play 7E FF 06 18 00 00 00 FE E3 EF **Single song loop play on**	
Cancel loop play 7E FF 06 18 00 00 01 FE E3 EF **Single song loop play off**	

(1) Sending this command during playback will loop the current track.

If the chip is in stop or stopped state, it will not respond to this command.

(2) If you want to turn off the single song loop playback, just send the command to turn it off. This will turn off the current song.

When you're done playing, stop.

3.5.15 Turn on and off the mute function of the current song

	7E FF 06 1A 00 00 00 FE E1 EF **Turn on the sound**
Instructions	7E FF 06 1A 00 00 01 FE E0 EF **Turn on mute**

3.5.16 Query the number of tracks in the current folder

instruction	7E FF 06 4E 00 00 00 FE AC EF **Query the total number of tracks in the current folder**

3.5.17 Query the total number of folders on the current device

instruction	7E FF 06 4F 00 00 00 FE AB EF **Query the total number of folders on the current device**

3.5.18 Multi-folder insert function

Command 7E FF 06 25 00 01 01 FE D4 EF **"ADVERT1" folder, track "001"**
Command 7E FF 06 25 00 01 02 FE D3 EF **"ADVERT1" folder, track "002"**
Command 7E FF 06 25 00 02 01 FE D3 EF **"ADVERT2" folder, track "001"**

Support QQ:515393967
www.gdkeji.com

(1) Folders can support up to 9 **folders, that is, from** ADVERT1 to ADVERT9. **Please follow the rules we give for** folder commands , otherwise errors will occur. Please note the folder naming format in the figure above. **(2) The**

 maximum number of files under a single insert folder cannot exceed 255, that is, "255xxx.MP3/WAV". **Please**

note the file name naming format in the figure

 above. (3) Improved the related applications of insert. For example, if the currently playing file is in a single

loop or current folder loop, even if an insert comes in, it will not change the current state, and it will still be a

single loop or folder loop, unless the user uses a stop

 command or other. (4) For the principle of insert, please refer to 3.5.6.

3.5.19 Specify file index and volume for playback (only GD3300B supports this function)

Instruction 7E FF 06 22 00 1E 01 EF	**Set the volume to 30 (0x1E is 30) and play the first song**
Instruction 7E FF 06 22 00 0F 02 EF	**Set the volume to 15 (0x0f is 15) and play the second song**

4. Reference Circuit

     We provide detailed design reference for chip application. n Serial

communication interface, the baud rate is 9600 by default and can be modified according to

customer requirements; n **External** AD

button interface circuit; n **External mono amplifier reference circuit;**

4.1 Serial Interface
     The serial port of the chip is 3.3V **TTL** level, so the **default interface level is 3.3V. If the system is 5V. It is**

recommended to connect a 1K **resistor in series to the serial port docking interface. This is enough to meet**

general requirements. If it is used in places with strong electromagnetic interference, please refer to the

instructions in "Precautions". The chip has been tested normally in both 5V **and** 3.3V systems, and everything

is normal. It is directly connected and there is no 1K resistor **in series .**

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd.   **GD3200A/GD3200B/GD3200D Datasheet**

4.2 External Mono Amplifier
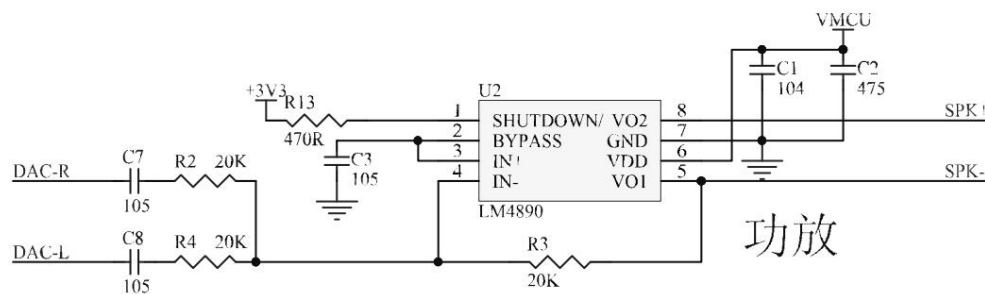

Here we take the LM4890 amplifier as an example. For specific parameters, please refer to the IC datasheet.

If you need a higher power amplifier, please find a suitable amplifier by yourself.

4.3 External headphone circuit
Here R1 and R2 **are limiting resistors to prevent the external sound source from having too large an amplitude (the maximum value of Vp-p is 3.0V).**

Affects the stability of the system. C1 and C2 are DC blocking capacitors to prevent the DC level of the external sound source from affecting the chip.

Internal bias.

5. GD3200A/GD3200B/GD3200D package (see schematic diagram for details)

6. Notes

IO input characteristics						
Symbolic parameters		**Minimum**	**Typical**	**Maximum**	**Unit**	**Test Conditions**
VIL	Low-Level Input Voltage **-0.3** 0.7V			**- 0.3*VDD** V		VDD=3.3 V
VIH	High-Level Input Voltage		DD	**- VDD** + 0.3 V		VDD=3.3 V
IO output characteristics						
Symbolic parameters		**Minimum**	**Typical**	**Maximum**	**Unit**	**Test Conditions**
VOL	Low-Level Output Voltage	-	-	0.33	V	VDD=3.3 V
VOH	High-Level Output Voltage	**2.7**	-	-	V	VDD=3.3 V

1. The external interfaces of the chip are all 3.3V TTL level , **so in the design of the hardware circuit, please pay attention to Level conversion problem.**

In addition, in a strong interference environment, please pay attention to some electromagnetic compatibility protection measures. GPIO uses optocoupler isolation. **Add** TVS, **etc.**

2. The ADKEY **key values are based on the general usage environment. If the key is set under strong inductive or capacitive load**

In this environment, please pay attention to the power supply of the chip. It is recommended to use a separate isolated power supply, and also add magnetic beads and inductors **When filtering the power supply, you must ensure that the input power is as stable and clean as possible. If this is not possible, Please contact us to reduce the number of buttons and redefine wider voltage distribution.**

3. For serial communication, in general use environment, just pay attention to level conversion. If there is strong interference environment, Or long-distance RS485 **applications, please pay attention to signal isolation and strictly follow industrial standard design. Communication circuit. Please contact us and we will provide design reference.**

7. Disclaimer

nPreparatory knowledge for

development GD **series products will provide as comprehensive development templates, drivers and application documentation as possible to facilitate users' use, but users are also required to be familiar with the hardware platform used in their product design and related** C **language knowledge.**

n EMI and EMC The mechanical

structure of the GD **series chips determines that their** EMI **performance must be different from that of the integrated circuit design.** The EMI of GD **series chips can meet most applications. If users have special requirements, they must negotiate with us in advance.**

The EMC performance of the GD **series chips is closely related to the design of the user's baseboard, especially the power circuit, I/ O isolation, and reset circuit. The user must fully consider the above factors when designing the baseboard. We will strive to improve** the electromagnetic compatibility characteristics of the GD series chips, but we do not provide any guarantee for the EMC performance **of the user's final application product .**

nRight to modify documents

Guangzhou Guodian Technology Co., Ltd. reserves the right to modify the relevant documents of GD **series products at any time without prior notice.**

n ESD electrostatic discharge protection

Some components of the GD series products have built-in ESD **protection circuits. However, in harsh operating environments, users are still recommended to provide** ESD **protection measures when designing the baseboard, especially the power supply and** IO **design,** to ensure stable operation of the product, such as wearing a reliably grounded anti-static ring, touching a water pipe connected to the ground, etc.

注意：

由于支持TF 卡和SPI-Flash 为不同版本，购买及使用时请分清所需要的版本，以免出错。
